

OP Jindal University Raigarh-Chhattisgarh

OP JINDAL UNIVERSITY OP Jindal Knowledge Park, Punjipatra, Raigarh-496109

Department of Civil Engineering

Scheme and Syllabus of Bachelor of Engineering School of Engineering Session- 2020-2024

Program Outcomes

PO-1: Knowledge and Problem Solving: Acquire in-depth scientific knowledge of their discipline both in theory and practical, demonstrate basic skills, investigate, apply, and solve the problems in a variety of contexts related to science and technology.

PO-2: Communication and Teamwork: Develop skills to communicate effectively to diverse platforms and contribute meaningfully to different capacities as a leader, team member or individual.

PO-3: Modern tools and techniques for Scientific Experiments: Apply modern tools and techniques to carry out scientific experiments accurately, record, analyze and predict the result for valid conclusion with clear understanding of limitations.

PO-4: Logical thinking: Develop logical thinking and expertise with precision, analytical mind, innovative thinking, clarity of thought, and systematic approach for proving or disproving the facts after mathematical formulation. with precision, analytical mind, innovative thinking, clarity of thought, expression, and systematic approach

PO-5: Skill development and Employability: develop elementary computing and soft skills to prepare students for industry, entrepreneurship and higher education with precision, analytical mind, innovative thinking, clarity of thought, expression, and systematic approach.

PO-6: Ethics and citizenship: Able to recognize different value systems and ethical principles; and commit to professional ethics, norms, and responsibilities of the science practice and act with informed awareness to participate in civic life activities.

PO-7: Society, Environment and Sustainability: Enhance ability to elicit views of others and understand the impact of various solutions in the context of societal, economic, health, legal, safety and environment for sustainable development.

PO-8: Life-long learning: Acquire fundamental knowledge for lifelong learning to participate in the extensive context of socio-technological change as a self-directed member and a leader.

Programme Specific Outcome (PSO)

PSO_1: Design and develop infrastructural facility using concepts of Mathematics, Civil Engineering and other related disciplines to meet end users' objectives.

PSO_2: Test and analyze the quality of various civil engineering materials and to integrate the same to assure quality in construction.

PSO_3: Ensure the holistic growth through the awareness of effective communication, ethical responsibilities and physical/mental fitness.

PSO_4: Build a solid foundation in the domain of Civil Engineering for developing analytical, technical, professional & management skills

Programme:	B.Tech	Semester :	Ι
Name of the Course:	Mathematics-I	Course Code:	SOE-B-FY101
Credits :	5	No of Hours :	50
Max Marks:	100		

Course Description:

Learning Objective 1. Find the Rank and Inverse of matrix by using Elementary Transformations. 2. Solve systems of linear equations (homogeneous & non-homogeneous), Eigen values and Eigen vectors of matrix. 3. Find the nth derivative by using Leibmitz's, Taylor's and Maclaurin's Theorem. 4. Differentiation of functions having more than one variable. 4. Integration of functions having nth power, double and triple integral and applications. 5. Gradient, divergence and curl, line integral, Surface integral and Volume integral. 6. Relation between line integral, Surface integral and Volume integral.

Course Outcomes:

On successful completion of this course, students will be able to:

CO1	Find Rank and Inverse of matrix by using Elementary Transformations
CO2	Understand applications in Engineering Problems
CO3	Understand Successive Differentiation, Leibmitz's Theorem for nth derivative of two functions.
CO4	Understand Taylor's and Maclaurin's Theorem and tracing of curves.
CO5	Understand Limits, continuity and differentiability of function of several variables.
CO6	Understand Partial derivatives, Maxima and minima of function of two or more variables.
C07	Understand Reduction formulae, Double and triple integrals, Change of order of integrations. Beta and Gamma functions; Applications to area and volume.
CO8	Understand Beta and Gamma functions, Applications to area and volume.
CO9	Understand Gradient, divergence and curl and Properties of gradient, divergence and curl.
CO10	Understand Line integral, Surface integral, Volume integral, Green's theorem in a plane; Gauss's Divergence theorem; Stoke's theorem.

Syllabus

Unit 1: Linear Algebra

Matrix algebra; Elementary transformations; Inverse of a matrix; Rank of matrix; Systems of linear equations (homogeneous & non-homogeneous); Eigen values and Eigen vectors; Cayley-Hamilton theorem; Applications of matrices in Engineering.

Unit 2: Differential Calculus

Successive differentiation; Leibnitz's theorem; Taylor's and Maclaurin's series; Radius of curvature; Curve tracing.

Unit 3: Multivariable Calculus

Limits, continuity and differentiability of function of several variables; Partial derivatives; Maxima and minima of function of two or more variables; Method of Lagrange's multipliers; Differentiation under integral sign

Unit 4: Integral Calculus

Reduction formulae; Double and triple integrals; Change of order of integrations; Beta and Gamma functions; Applications to area and volume

Unit 5: Vector Calculus

Scalar and vector point functions; Gradient, divergence and curl; Properties of gradient, divergence and curl; Line integral; Surface integral; Volume integral; Green's theorem in a plane; Gauss's Divergence theorem; Stoke's theorem

Programme :	B.Tech.	Semester :	I
Name of the	Engineering Chemistry	Course Code:	SOE-B-FY102
Course:			
Credits :	3	No of Hours :	45
Max Marks :	100		

Course Description:

This course aims at giving students theoretical understanding about the basic concepts of Chemistry and to acquire the skills required for an engineer. Reaction rates and factors that influence the reactions and the importance & utility related to it is introduced. The importance of water in industrial usage, significance of corrosion control to protect the structures, polymers and their usage as an important material to be studied. The students will gain knowledge about fuel, characteristics and ranking.

Course Outcomes (CO)

Studen	ts will be able to										
CO 1	Demonstrate an understanding of scientific facts and concepts, scientific										
	methods and techniques, scientific terminology, and methods of presenting										
	scientific information										
CO 2	Apply and use scientific facts and concepts, scientific methods and										
	techniques, scientific terminology to communicate effectively and apply										
	appropriate methods to present scientific information										
CO 3	Facilitate the application of chemical principles in engineering and										
	technology for future technopreneurs and researchers										

Syllabus

Unit I: Reaction Kinetics

Factors affecting rate of reaction (reactant concentrations, temperature, physical states and surface areas, solvent and catalyst); Rate of reaction, mathematical expression, units, instantaneous & average rate; Rate Law-Differential & Integrated Rate law, order and molecularity, determination of rate law- Differential, Integral, Half-life, Initial rate & graphical method, rate constants (up to second order with one reactant only); Half-lives and radioactive decay kinetics (carbon dating); Collision model of reaction kinetics, activation energy, Arrhenius equation; Catalysis.

Unit II: Corrosion Chemistry

Corrosion fundamentals (causes, consequences & driving force); Theories of Corrosion: Dry/ Chemical Corrosion & Wet/ Electrochemical corrosion; Forms of corrosion- Galvanic, Concentration Cell / Differential aeration, wire-fence, waterline, pitting, crevice, stress corrosion, corrosion fatigue, microbial & soil corrosion; Factors affecting corrosion: nature of the metal & corroding environment: Corrosion Control- Proper design, materials selection, protective coatings, use of inhibitors, modifying/ alteration of environment, cathodic protection (sacrificial anodic & impressed current cathodic).

Unit III: Water Chemistry

Introduction, sources of water, impurities present in water & their effect, requirement of boiler feed water; Alkalinity – types & determination (including numerical problems); Hardness - definition, types, determination; Water softening process- Lime and Soda, Zeolite & Ion Exchange Process (including numerical problems); Boiler problems (causes & removal) - sludge and scale, caustic embrittlement, boiler corrosion, priming and foaming; Conditioning of boiler feed water (carbonate, phosphate, colloidal & calgon conditioning).

Unit IV: Fuels Chemistry

Introduction (definition & classification, characteristics, combustion); Calorific value (HCV & LCV) & its determination - by Dulong's formula & Bomb Calorimeter (principle & working); Coal, ranking & analysis - proximate & ultimate analysis and their importance in ranking; Coke, importance as fuel, manufacturing & carbonization- high temp & low temp carbonization.

Unit V: Polymer Chemistry

Fundamentals (nomenclature, degree of polymerization, monomer units & classification), Polymerization- Addition, Condensation & Co-polymerization; glass transition temperature, tacticity & Ziegler-Natta catalyst; Preparation, properties, and technical application of major polymers (polyethylene, PVC, Teflon, Nylon 6,6, Bakelite); Introduction to Resin, Types of Resins, Thermoplastic & thermosetting Resin, Industrial applications of resin; Elastomers, natural rubber & vulcanization process.

Textbooks:

- 1. Engineering Chemistry by P.C. Jain & Monica Jain, 2008
- 2. A textbook of Engineering Chemistry by Dara, S.S. & Umare, S.S., S Chand, 2013
- 3. Engineering Chemistry by Palanna O.G., Mc Graw Hill Edu., 2017

Programme:	B.Tech.	Semester :	Ι
Name of the Course:	Physics-I	Course Code:	SOE-B-FY103
Credits :	3	No of Hours :	45
Max Marks:	100		

Course Description:

Applied Physics is a science course for students interested in the technical fields. This course is designed for the student who needs a broad understanding of physics and the ability to apply those principles in the work force. The Physics-I course is basically fundamentals of electronics, theory and applications of laser, concepts of Newton's law of motion, parameter of Mechanics, interference of light, good conditions for interference and its engineering applications. The purpose of studying Physics-I is to introduce the mind to the scientific method of analysis through which, the practical problems can be identified, explanations generated and logical solutions selected which in essence are requisites for the development of good engineering sense.

Course Outcomes:

After Completion of the course Students will be able to:

CO1	Understand basics of Solid-State Physics.
CO2	Know the fundamental principles of semiconductors
CO3	Understand the interference from wave optics concepts and know its applications.
C04	Acquire knowledge and understanding of fundamental principles of modern physics relevant to problems of Electrical and Electronics Engineering

Syllabus:

Unit I.

Solid State Theory: Formation of energy bands in metals, Classification of solids on the basis of energy band diagram, Conductivity of Semiconductors, mobility in conductor & semiconductor.

Unit II.

Electronics: Electrons and holes in an intrinsic semiconductors, Donor and acceptor impurities, Fermi level, Carrier densities in semiconductor, Hall effect, Diffusion, Recombination, Junction Diode, PN junction characteristic, Effect of Temperature, Depletion Layer, Breakdown Mechanism: Zener and Avalanche Breakdown, Half wave and full wave rectifiers, filters, Zener diode as a regulator, Transistors (PNP & NPN) Operation, CE, CB, CC configuration.

Unit III.

Lasers: Principles and working of laser, population inversion, Laser characteristics, components of laser, Einstein's coefficients, He-Ne laser, Ruby laser, Laser applications.

Unit IV.

General Mechanics: Central and non-central forces, Inverse square force, Potential energy function F = -grad V, equipotential surfaces and meaning of gradient. Conservative and non-conservative forces, Conservation laws of energy & momentum, Harmonic oscillator, damped harmonic motion forced oscillations.

Unit V.

Interference of light: Superposition of Waves, Conditions for Interference, Methods of formation of coherent sources, Theory of Interference, Fresnel's Biprism, Newton's ring, Diffraction grating, Rayleigh's criterion of resolution, Engineering applications of Interference phenomenon.

Programme:	B. Tech	Semester:	Ι
Name of the	Basic Computing	Course Code:	SOE-B-FY104
Course:			
Credits:	4	No of Hours:	55
Max Marks:	100		

Course Description:

This course will expose students to developments in computer technology and understand the working of a computer system. It will introduce end-user computing and build problem solving skills by using C programming.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO	Course Outcome
Number	
CO1	Makes students gain a broad perspective about the uses of computers in engineering industry.
CO2	Develops basic understanding of computers, the concept of algorithm and algorithmic thinking.
CO3	Develops the ability to analyze a problem, develop an algorithm to solve it.
CO4	Develops the use of the C programming language to problem solving and develops the basic concepts and terminology of programming in general.
CO5	Introduces the more advanced features of the C language for implementation in diverse platforms.

Syllabus:

Unit I Introduction to Computers

Basic Concepts, Evolution, Computer Organization, Peripheral Devices, Software – System Software, Application Software, Computer Languages – Low Level, Machine Level and High-Level Languages, Compiler and Assembler, Microprocessors, Memory, Technological Trends. Algorithms and Flow Chart: Algorithm and its characteristics, flowchart, Algorithm involving Decisions and Loops, Problem solving methods. Pseudo code, top down & bottom-up approaches of program design

Unit II Introduction to C

History of C, Features of C Language, Structure of a C program, Basic Input Output Execution of C Program- Compiling, Linking, debugging, and running a program. Variables, Constants and Operators: C character set – Tokens, Constants Keywords, identifiers, and Variables. Data types – Data type Qualifiers, Declaration of variables, Arithmetic, Logical, Assignment, Relational, Increment and Decrement, Conditional, Bit wise, Special Operator, Precedence and Associativity

Department of Civil Engineering

Unit III Looping and Functions

Branching & Looping: Introduction – Simple if statement, if-else, else-if ladder, nested if-else, Switch statement, go to statement. Loops - while, do-while, for loop, nested loops infinite loops Functions: Introduction to functions – Declaration, definition and calling of function, Function arguments and return value, scope and lifetime of variables call by value, call by reference. Storage classes. Recursion. Library functions

Unit IV Arrays and Pointers

Arrays: Declaration and initialization of one dimensional, two dimensional and character arrays, accessing and manipulating array elements, array applications - matrix operations, searching, sorting. String manipulations. Pointers: Pointers concepts, pointers and function arguments, pointer arithmetic

Unit V Structures and File Handling Structure

Structure declaration, definition, initialization and accessing. Structure Assignment, Nested Structure, Structures and Functions, Structures and arrays. File Handling: Concept of a file – Data Organization, reading, writing, manipulating and troubleshooting, file types, file opening modes.

OP Jindal Knowledge Park, Punjipatra, Raigarh-496109 Department of Civil Engineering

Programme:	B. Tech.	Semester :	Ι
Name of the	Engineering Graphics	Course Code:	SOE-B-FY105
Course:			
Credits:	3	No of Hours :	50
Max Marks:	100		

Course Description:

The course in Engineering Graphics is aimed at inculcating the ability of imagination in the mind of the students, to improve their visualization skills and logical thinking, to build in them a capability of communicating through this unique language of engineers by learning conventional graphical techniques as well as computer-aided drawing skills, to develop interpretation competencies of professional drawings, to transfer an abstract object onto the paper through drawing.

Course Outcomes:

On successful completion of this course, students will be able to:

CO Number	Course Outcome
CO1	Gain knowledge of Fundamentals of Engineering drawing.
CO2	Draw orthographic projections of lines, planes, and solids
CO3	Draw sections of solids and development of lateral surfaces including cylinders, cones, prisms, and pyramids.
CO4	Construct isometric scale, isometric projections, and views.
CO5	Draw projections of lines, planes, solids, and sections of solids including cylinders, cones, prisms, and pyramids using AutoCAD.

Syllabus:

Unit 1 :

Fundamentals of Engineering Drawing

Introduction to Drawing instruments & their uses, Engineering Lettering, Drawing sheet - Layout of drawing sheets, sizes of drawing sheets, Line – Types of lines and their applications in Engineering Drawing, Dimensioning. Introduction to scales

Engineering Curves

Conic sections and Basic construction of Cycloid, Involutes

Introduction to Computer-Aided Drafting (CAD):

Basic Drawing and Editing Commands, Dimensioning, Knowledge of setting up layers, Text. (To be covered with CAD package)

Unit 2 :

Projections of Points

Introduction to projections, Projection of points in all four quadrants.

Projections of Lines

Projections of lines (by First angle projection method only) parallel to one or both the reference planes, perpendicular to one of the reference planes. Projections of lines inclined to either horizontal plane or vertical plane and both the planes i.e., oblique lines. Trace of a line.

Unit 3 :

Projection of Planes

Projections of planes (by First angle projection method only) inclined to either horizontal plane or vertical plane and both the planes i.e., Oblique planes. Use change of positions or Auxiliary plane method.

Projection of Solids

Introduction to Solids, Types of Solids, Projection of Solids inclined to one and both the reference plane. Use change of positions or Auxiliary plane method.

Unit 4 :

Section of Solids

Projections of geometric solids cut by plane perpendicular to at least one reference plane (Exclude Curved section Plane).

Development of Surfaces

Methods of development of lateral surfaces of various solids, development of surfaces of cut solids.

Unit 5 :

Orthographic Projection

Orthographic projections of given pictorial view by First angle method of projections only. Drawing of orthographic projections using Auto CAD (only for Term Work)

Isometric Projection

Introduction, Isometric scale, Isometric projection and Isometric views of solids and objects.

Course:	Electronics Engineering	Code:	
Credits :	3	No of Hours	45
		:	
Max Marks:	100		

Course Description:

The subject curriculum focuses on fundamentals of electrical and electronic circuits. It covers the DC and AC electrical circuit analysis, magnetic circuit analysis and description of basic electronics components and their applications.

Course Outcomes:

On successful completion of this course, students will be able to:

CO Number	Course Outcome
CO1	Understand the basic concepts of Core Electrical Engineering subjects.
CO2	Analyse different network theorems.
CO3	Draw phasor diagram for various electrical circuits.
CO4	Understand the fundamental of semiconductor devices.
CO5	Know the different application of transistors.

Course Contents:

UNIT-1: DC Electrical Circuit Analysis:

Voltage and current sources, dependent and independent sources, Source Conversion, Star-delta and delta-star conversions, Ohm's Law, Kirchhoff's Laws & their limitations, Nodal analysis, loop analysis and Mesh current methods, Superposition principle, Thevenin's and Norton's theorems, Maximum power transfer theorem.

UNIT-2: AC Circuits:

Single- phase AC Circuits: Single phase emf generation, average and effective values of sinusoids, R.M.S. value, form factor and peak factor of AC quantity, Concept of phasor diagram, Concept of Power factor, impedance and admittance, Active, reactive and apparent power, analysis of R-L, R-C, R-L-C series, parallel and series-parallel circuit and Resonance condition.

UNIT-3: Magnetic Circuits:

Basic definitions, magnetization characteristics of Ferro magnetic materials, selfinductance and mutual inductance, energy in linear magnetic systems, coils connected in series, AC excitation in magnetic circuits, magnetic field produced by

current carrying conductor, Force on a current carrying conductor. Induced voltage, fundamental laws of electromagnetic Induction, direction of induced E.M.F.

UNIT-4: Semiconductor Diodes:

Introduction to semiconductor, Formation of P-N Junction, P-N Junction Diodes; Semiconductor Diodes, V-I Characteristics, Effect of Temperature on V-I Characteristics, Ideal Diode, Diode equation, Diode Resistance, Transition and Diffusion Capacitance. Light Emitting Diode, Zener Diode, Photodiode. Applications of Diodes.

UNIT-5: Transistors:

Transistor: Introduction, Construction, Types: npn and pnp, Current components. Transistor as amplifier, Transistor Characteristics. Digital logic fundamentals, Boolean Algebra, truth table, Logic Gates.

Text Books:

- 1. E. Hughes, Electrical Technology, ELBS, 1997.
- 2. B L Theraja, Electrical technology, Basic Electrical Engineering, Volume 1, S Chand.

Programme:	B. Tech.	Semester :	I
Name of the Course:	Basic Electrical and Electronics Engineering	Course Code:	SOE-B-FY107
Credits :	1	No of Hours :	30
Max Marks:	50		

Course Description:

The response of Electrical Circuit can be verified practically by applying different theorems and fundamental techniques. The students will become sure that the theoretical tricks which they have learned from books are true. The students will become competent in the field of circuit analysis

Course Outcomes:

On successful completion of this course, students will be able to:

CO Number	Course Outcome
CO1	Get the basic knowledge about the Electric circuits.
CO2	Understand the basic construction of transistors.
CO3	Get the knowledge about various measuring instruments.
CO4	Know about the components of electronic circuits.
S	

Syllabus:

List of Experiments:

- 1. Study of Electrical Safety precautions.
- 2. Study of CRO, DSO, Function Generator, Multimeter, Power supply.
- 3. To verify KCL and KVL.
- 4. To verify Thevenin's and Norton's Theorem.
- 5. To verify Superposition Theorem.
- 6. Determine resonant frequency of series R-L-C circuit.
- 7. To measure Current, Power, Voltage and Power Factor of series R-L-C Circuit.
- 8. To measure the armature and field resistance using Ohm's law.
- 9. Determine the VI Characteristics of PN junction Diode
- 10. Design and study the characteristics of Common Emitter configuration of NPN transistor
- 11.Design and Study the characteristics of Common Collector Configuration of NPN transistor
- 12. Study Different logic gates and verify their truth table.

Programme :	B.Tech.	Semester :	Ι
Name of the	Engineering Chemistry Lab	Course Code :	SOE-B-FY108
Course:			
Credits :	1	No of Hours :	30
Max Marks :	50		

Course Description:

This Engineering Chemistry Laboratory is common to first year branches of UG Engineering. The course enables students to

- Apply and use knowledge, methods and techniques for analysis
- Develop an ability to analyze, evaluate and synthesize scientific information
- Develop experimental and investigative scientific skills

Course Outcomes (CO)

CO Number	Course Outcome
CO 1	Understand the use of instruments, sensors and methods for analyzing
	various parameters
CO 2	Collect, process and analyze data using ICT tools

List of Experiments

- 1. Determination of type and extent of Alkalinity in the given sample of water using hydrochloric acid solution (acid-base titration)
- 2. Determination of chloride ion content in a given water sample by Mohr's method (AgNO₃, Cl- titration)
- 3. Determination of the Dissolved Oxygen in a given water sample by Wrinkler's method using Std. Sodium thiosuphate solution (iodometric titration)
- 4. Determination of temporary & permanent hardness in water sample by EDTA method (complexometric titration)
- 5. Determination of order and rate law expression of acid decomposition of thiosulfate ion solution (kinetics study)
- 6. Determination of the concentration of unknown solution of an electrolyte by conductivity measurement (using data loggers with conductivity probe and drop counters)
- 7. Determination of equivalence point and concentration of acid by pH measurement (using data loggers with pH probe and drop counters)
- 8. Demonstration of different types of Corrosion of metals
- 9. Kinetics ICT Exercise: Determination of order and rate constant of reaction using a spreadsheet and graphical techniques
- 10. Acid & Base ICT Exercise: Determination of equivalence point and concentration of acid (or base) using spreadsheet and graphical techniques.

Programme:	B.Tech	Semester :	Ι
Name of the	Spoken English	Course Code:	SOE-B-FY109
Course:	Communication		
Credits :	2	No of Hours :	30
Max Marks:	50		

Course Description

This course examines the process of spoken communication in English language with an emphasis to develop fluency in it. Through individual and group activities, students work on improving pronunciation, practice conversation strategies and delivering oral presentation.

Course Outcome

After Completion of the course Students will be able to:

CO Number	Course Outcome
CO 1	Reduce anxiety by recognizing and using communication strategies.
CO2	Apply principles of effective and ethical speaking during conversation at the various situations.
CO3	Formulate the speech according to the purpose, audience and time constraints
CO4	To recognize and use effectively non-verbal clues in communication
CO5	Give effective presentation.

Syllabus

Unit 1: Basics of Communication

Introduction to Communication, Types of Communication, Barriers to Communication, Listening Skill.

Unit 2: Grammar in Use

Sentence Structures, Determiners and Preposition, Modals in Conversational Usage, , Voice, Punctuation.

Unit 3: Oral Communication

Speaking: An Overview, Combating Stage Fright, Describing Objects/Situations/People, Delivering Just-a-minute Sessions, Dialog delivery, one to one conversation

Unit 4: Body Language

Body Language - the role of body postures, movements, gestures, facial expressions, dress and make up in effective communication, Conduct while facing interviews.

Unit 5: Professional Presentation

Presentation, Power point Presentation, Group Discussion, Role Plays, Delivering Different Types of Speeches.

Department of Civil Engineering

Texts Books:

- 1. A Communicative Grammar of English by Geoffrey N. Leech and Jan Svartvik, Longman
- 2. Technical Communication for Engineers by Shalini Verma, Vikas Publishing House.
- 3. A Practical Course in Spoken English by Gangal J.K, Prentice Hall India Learning Private Limited.

Reference Books:

- 1. English for Technical Communication (With CD) by <u>Aysha Viswamohan</u>, McGraw Hill Education.
 - 2. Comprehensive English Grammar by Madan Sood, Goodwill Publishing House.

Programme:	B.Tech	Semester :	II
Name of the	Mathematics-II	Course Code:	SOE-B-FY201
Course:			
Credits :	5	No of Hours	5 Hrs/Week
Max Marks:	100		

Course Description:

Learning Objective 1. Evaluate first order differential equations including separable, homogeneous, exact, and linear. 2. Show existence and uniqueness of solutions. 3. Solve second order and higher order linear differential equations. 4. Create and analyze mathematical models using higher order differential equations to solve application problems such as harmonic oscillator and circuits. 5. Solve differential equations using variation of parameters 6. Solve linear systems of ordinary differential equations.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

CO Number	Course Outcome
CO1	Understand ordinary differential equation.
CO2	Understand applications in Engineering Problems
CO3	Understand higher order differential equation with constant coefficient.
CO4	Understand simultaneous linear equations with constant coefficients.
CO5	Understand Linear partial differential equation of first order.
CO6	Understand Non-homogeneous linear partial differential equations
CO7	Understand Euler's Formula, Functions having points of discontinuity Understand Fourier series, Linear and quasi linear equations
CO8	Understand Harmonic analysis.
CO9	Understand Method of separation of variables; Solution of heat equation;
CO10	Understand Wave equation; Laplace equation & Poisson's equation

Syllabus:

Unit 1: Ordinary Differential Equation of First order

Review of ordinary differential equation of first order; non linear differential equation of first order and their applications to engineering problems (viz. Simple

OP Jindal Knowledge Park, Punjipatra, Raigarh-496109 Department of Civil Engineering

electrical circuits, Heat conduction problem, Rate of decay of radio-active material, Chemical reactions and solutions, etc.).

Unit 2: Differential Equation of Higher order

Linear differential equations of higher order with constant coefficients; Method of variation of parameters; Cauchy's & Legendre's linear equations; simultaneous linear equations with constant coefficients; Applications to engineering problems.

Unit 3: Partial Differential Equation

Formation of partial differential equation; Linear partial differential equation of first order; Standard forms; Charpit's method; Homogeneous linear partial differential equations with constant coefficients; Non-homogeneous linear partial differential equations.

Unit 4: Fourier series

Euler's Formula; Functions having points of discontinuity; Change of interval; Even and odd functions; Half range series; Harmonic analysis.

Unit 5: Application of Partial Differential Equation

Method of separation of variables; Solution of heat equation; Wave equation; Laplace equation & Poisson's equation

Pr ogramme :	B.Tech.	Semester :	II
Name of the	Physics-II	Course Code:	SOE-B-FY202
Course:			
Credits :	2	No of Hours :	30
Max Marks:	100		

Course Description:

Applied Physics is a science course for students interested in the technical fields. This course is designed for the student who needs a broad understanding of physics and the ability to apply those principles in the work force. The Physics-II course is basically fundamentals of X-rays, its characteristics, its production method and uses, basics of nuclear energy and nuclear reactor, concepts of relativity its applications, formulation and solving the engineering problems on electromagnetism, Introduction to quantum physics and application in 1D and Various interpretations about the origin of Universe. The purpose of studying Physics-II is to develop the basic knowledge on the development and time-to-time applications of physics in diverse field.

Course Outcomes:

After Completion of the course Students will be able to:

CO Number	Course Outcome
CO 1	Acquire knowledge atomic and nuclear physics and explore their technological applications in diverse fields.
CO2	Acquire knowledge of basic principles of Relativity and able to differentiate between classical and quantum mechanics.
CO3	Knowledge of propagation of electromagnetic energy through transmission lines and the design of propagation medium based on the requirements.
CO4	Gain basic knowledge of quantum mechanics and origin of Universe.

Syllabus:

Unit I.

Atomic & Nuclear Physics: X-rays, Properties of X-rays, Bragg's law, Bragg's X-ray spectrometer, Characteristic X-ray spectrum, Moseley's law, Daune-Haun't criteria. Nuclei: properties, Mass defect, Binding energy, Criteria of Critical mass, Nuclear cross section, Nuclear fission: Controlled and uncontrolled chain reaction, Nuclear reactor and its site selection, Nuclear fusion, stellar energy(C-N cycle and P-P cycle).

Unit II.

The theory of relativity Frame of reference, Galileo's Transformations, Michelson-Morley experiment and its negative result, Einstein's theory of relativity (postulates), Lorentz Transformation, Time dilation, Length contraction, Twin's Paradox, Doppler's effect, Addition of Velocities, Relativistic mass- Variation of Mass with Velocity, Equivalence of mass and energy.

OP JINDAL UNIVERSITY OP Jindal Knowledge Park, Punjipatra, Raigarh-496109 Department of Civil Engineering

Unit III.

Electromagnetism: Motion of Charged Particles in crossed electric & magnetic fields, Velocity Selector & Magnetic focusing, Gauss law, continuity equation, in consistency in Ampere's Law, Maxwell's equations (differential and integral forms), propagation of plane electromagnetic waves in conducting and nonconducting medium. Gradient, divergence, and curl of scalar and vector fields, Formulation and solving the engineering problems on electromagnetism.

Unit IV.

Quantum mechanics: Introduction to quantum physics, black body radiation, photon concept, de Broglie hypothesis, wave-particle duality, verification of matter waves, wave function and its properties, Phase & group velocity, Uncertainty principle, Schrodinger's equation and its application to particle in 1-D box.

Unit V.

Origin of Universe: Various interpretations about the origin, Big Bang Theory, Large Hadron Collider (LHC) experiment, Hawkins theory about the universe.

Name of the	Basics of Civil Engineering	Course Code :	SOE-B-FY204
Course:			
Credits :	3	No of Hours :	45
Max Marks :	100		

Course Description:

Civil Engineering as a profession; General introduction to history of civil engineering; types and classification of buildings; setting out of buildings; building materials- various types of bricks, various types of cements, natural and fly ash aggregates, cement mortar and concrete, TMT and structural steel; Overview of foundation engineering; Introduction to traffic and transportation engineering; Case studies of some advance technologies in civil engineering.

Course Outcomes:

After Completion of the course Students will be able to:

CO Number	Course Outcome
CO1	Explain the importance of civil engineering in the infrastructural development of the society.
CO2	Illustrate the types, uses and properties of various civil engineering materials, foundations, traffic and plans of civil engineering structures.
CO3	Understand the latest technologies in the construction of different civil engineering structures.

Syllabus:

Unit- I

Civil Engineering Materials

Masonry Materials: Types and characteristics of burnt clay and fly ash bricks, AAC blocks, paver blocks; various bonds in masonry.

Cement: Raw materials, Initial and final setting times, types and manufacturing process of cements.

Aggregate: Coarse and fine aggregates and their characteristics.

Steel: Difference among cast-iron, wrought iron, steel, mild steel, tor-steel and 550D grade of steel.

Mortar and Concrete: Proportions of cement mortar and concrete and their characteristics, self-healing concrete.

Activity: Industrial visit to any one of following (student will submit visit report)

- 1. Brick manufacturing plant
- 2. Cement manufacturing plant
- 3. Steel rolling mill.

Unit-II

Building Plans: Components of residential, industrial, commercial and public buildings. Concepts of smart buildings and smart city.

Department of Civil Engineering

Activity: Study of architectural principles of any one in following (student will submit a report)

- 1. Central jail building
- 2. Church
- 3. Auditorium
- 4. Industrial building
- 5. Power station
- 6. Software technology park
- 7. Naya Raipur development authority, smart city

Unit- III

Basic concepts of transportation and traffic engineering, signage and signals. Kinetic roadway and walk ways, automation in tunnelling and bridge construction. **Activity:** Case study any one of following (student will submit a report)

- 1. Warli Bandra sea link
- 2. Britain France chunnel
- 3. Pumbam bridge

Unit-IV

Civil Engineering Foundations

Various types of foundations for high rise building, bridges, dams, roads.

- Activity: Case study of any one of following (student will submit a report)
 - 1. Burj Khalifa,
 - 2. Petronas towers
 - 3. Statue of unity
 - 4. Swaminarayan temple of the Bochasanwasi in Dubai
 - 5. Flipkart headquarters at Bangalore

Unit-V

Advance Technologies in Civil Engineering

Modular construction, cloud collaboration, supply chain management in civil engineering. Introduction to software in civil engineering, photovoltaic glassing, augmented and virtual reality in civil engineering. Overview of total station and application of drones in civil engineering.

Activity: Any one case study in (student will submit a report)

- 1. Cloud collaboration in civil engineering,
- 2. Supply chain management in civil engineering,
- 3. Software application in civil engineering
- 4. Application of drones in civil engineering

Text Books:

- 1. Chen,W.F. and Liew, J.Y.R., The Civil Engineering Handbook, 2nd Ed., CRC Press, Taylors and Francis, (2002).

Programme :	B.Tech.	Semester :	II
Name of the	Engineering Mechanics	Course Code:	SOE-B-FY-205
Course:			
Credits :	4	No of Hours :	50
Max Marks:	100		

Course Description:

This course helps in understanding the various types and system of forces. Resolution and addition of forces. It helps the way to apply the condition of equilibrium in various forces system. It also helps in understanding the friction, centroid, and center of gravity etc. At last, it helps in understanding the concept of kinetics of rigid body and energy principle.

COURSE OUTCOMES:

After Completion of the course Students will be able to:

CO Number	Course Outcome
CO1	Understand various force system and apply various concepts to solve problems related with force.
CO2	Understand the different structures like Frame, Trusses, and structures.
CO3	Understand the role of friction and its industrial applications.
CO4	Understand and apply the concept of kinetics and energy principles.

Syllabus:

UNIT-1:

Definitions of mechanics, statics, dynamics, characteristics of a force, principle of transmissibility, Composition and resolution of forces, moment of forces.

System of Coplanar forces: Introduction to coplanar & non-coplanar force system. Forces and their components. Moment of the force about a point, couple. Resultant of coplanar force system: Resultant of concurrent forces, parallel forces,

non-concurrent non-parallel system of forces. Varignon's theorem.

UNIT-II

Equilibrium of coplanar force system: Meaning of equilibrium, free body diagrams, equilibrium of concurrent, parallel and non-concurrent non-parallel (general) system of forces. Types of supports, determination of reactions at supports for various types of determinate beams.

Analysis of pin jointed frame / truss: Perfect truss, Imperfect truss, Analysis of truss by method of joints and method of sections.

OP JINDAL UNIVERSITY OP Jindal Knowledge Park, Punjipatra, Raigarh-496109 Department of Civil Engineering

UNIT-III: Friction

Definition of friction, force of friction, Limiting frictional force, coefficient of friction, angle of friction, angle of repose, relation between angle of friction and coefficient of friction. Cone of friction, types of friction, laws of friction, advantages and disadvantages of friction. Equilibrium of bodies on level plane, external force applied on horizontal and inclined up and down. Equilibrium of bodies on inclined plane external forces is applied parallel to the plane, horizontal and inclined to inclined plane.

UNIT-IV:

Centroid: Definition, centroid of basic geometrical figures such as square, rectangle, triangle, circle, semicircle and quarter circle. Centroid of composite figure.

Centre of Gravity: CG of simple solids such as cylinder, sphere, hemisphere. Cone, cube, and rectangular block. Centre of gravity of composite solids.

Moment of inertia: of plane areas, parallel axis theorem. Introduction to polar moment of inertia, product of inertia and mass moment of inertia. Problems on moment of inertia of composite areas.

UNIT: V

Kinetics of particles: Newton's laws of motion, D' Alembert's principle, equation of dynamic equilibrium linear motion, curvilinear motion. Kinetics of rigid bodies, D' Alembert's principle for bodies under rotational motion about a fixed axis.

Energy principles: Work done by a force, potential and kinetic energy, power, work energy equation, principle of conservation of energy.

Text Books:

1. B.C. Punmia-Theory of structures, Laxmi Publication.

Credits :	1	No of Hours :	30
Max Marks:	50		

Course Description:

It allows to study the basic workshop practices which enables the students to carry out/understand the day-to-day work easily with the application of Engineering knowledge through machine tools and equipment.

COURSE OUTCOMES:

After Completion of the course Students will be able to:

CO Number	Course Outcome
CO1	Graduates will gain a strong foundation in machine tool engineering.
CO2	Acquire knowledge and hands-on competence in applying the concepts of manufacturing science in the development of mechanical systems.
CO3	Demonstrate creativeness in designing new systems components and processes in the field of engineering in general and mechanical engineering in particular.
CO4	Work effectively with engineering and science teams as well as with multidisciplinary designs.
CO5	Skillfully use modern engineering tools and techniques for mechanical engineering design, analysis and application.

Syllabus:

Week	Content	Practical (Hrs)
1 & 2	 CARPENTRY SHOP 1. Introduction. 2. Various types of woods. 3. Different types of tools, machines and accessories. 4. Demonstration of different wood working tools / machines. 5. Demonstration of different wood working processes, like planning, marking, chiseling, grooving, turning of wood etc. 6. One simple job involving any one joint like mortise and tenon dovetail, bridle, half lap etc. 	4
3 & 4	WELDINGSHOP 1. Introduction 2. Types of welding, ARC welding, Gas welding, Gas Cutting.	4

OP Jindal Knowledge Park, Punjipatra, Raigarh-496109 Department of Civil Engineering

	 Welding of dissimilar materials, Selection of welding rod material Size of welding rod and work piece. Different types of flame. Elementary symbolic representation, Safety precautions in welding safety equipment's and its use in welding processes. Demonstration of different welding tools / machines. Demonstration on Arc Welding, Gas Welding, gas cutting and rebuilding of broken parts with welding. One simple job involving butt and lap joint 	
5 & 6	MACHINE SHOP	4
	2. Principal parts of a lathe	
	3. Measuring instruments	
	4. Cutting parameters	
	 Cutting parameters Tool materials 	
	4. Cutting parameters5. Tool materials6. Lathe operations7. Sofete presentions	
	 4. Cutting parameters 5. Tool materials 6. Lathe operations 7. Safety precautions 8. One simple ich involving lathe operations 	
7	 4. Cutting parameters 5. Tool materials 6. Lathe operations 7. Safety precautions 8. One simple job involving lathe operations. 	
7	 4. Cutting parameters 5. Tool materials 6. Lathe operations 7. Safety precautions 8. One simple job involving lathe operations. Test and quiz

Programme :	B.Tech.	Semester :	II
Name of the	Environmental Studies	Course Code :	SOE-B-FY207
Course:			
Credits :	2	No of Hours :	30
Max Marks :	50		

Course Objectives:

The course will empower the undergraduate students by helping them to Gain indepth knowledge on natural processes and resources that sustain life. Understand the consequences of human actions on the web of life and quality of human life. Develop critical thinking for shaping strategies for environmental protection, conservation of biodiversity, environmental equity, and sustainable development. Acquire values and attitudes towards understanding complex environmentaleconomic-social challenges, and active participation in solving current environmental problems and preventing the future ones. Adopt sustainability as a practice in life, society, and industry.

Course Outcomes (CO)

CO Number	Course Outcome
CO 1	Gain in-depth knowledge on natural processes and resources that sustain life.
CO 2	Understand the consequences of human actions on the web of life and quality of human life.
CO 3	Develop critical thinking for shaping strategies for environmental protection, conservation of biodiversity, environmental equity, and sustainable development.
CO 4	Acquire values and attitudes towards understanding complex environmental-economic-social challenges, and active participation in solving current environmental problems and preventing the future ones.
CO 5	Adopt sustainability as a practice in life, society, and industry.

Syllabus

Unit I: Ecology and Bio-Diversity

Ecology, Environment & Ecosystem, Biotic & Abiotic Components; Structure & functions of Ecosystem, Productivity, Decomposition, Energy Flow, Nutrient cycling, Food Chain & Food Web, Ecological Pyramids; Ecological succession; Biodiversity: Concept, Importance, and Threats & Conservation

Unit II: Environment and Natural Resources

Earth's Environment: Atmosphere, Lithosphere, Hydrosphere & Biosphere, functions and related problems; Environmental degradation and its causes; Natural resources, Renewable and Non-renewable Resources & associated problems; Study of major Resources on Earth (overview): Forest, Water, Mineral, Food, Energy and Land.

OP JINDAL UNIVERSITY OP Jindal Knowledge Park, Punjipatra, Raigarh-496109 Department of Civil Engineering

Unit III: Air Pollution

Classification of air pollutants, sources and effects of CO, SOx, NOx, Hydrocarbons, PM, Acid Rain, Ozone, Photochemical Smog & Peroxy Actyl Nitrate (PAN). Earth's energy balance, Green House Effect, Global warming; Stratospheric Ozone & its Depletion; Lapse rate & Temperature Inversion; Ambient Air Quality standard; Air pollution Control Techniques for Gaseous and Particulate air pollutants & equipment used.

Unit IV: Water Pollution & Soil Pollution

Point & non-point source; Water pollutants & types, sources and effects; Water Quality measurement, Dissolved Oxygen, BOD & COD; Wastewater Management, Primary, Secondary & Tertiary stages: Objective, Process overview and Equipment used.

Soil formation, composition & profile; Sources of Soil pollution & effect; Solid Waste Management: Objective, Process & Disposal Techniques.

Unit V: Sustainability & Social issues and Environment

Concept of Sustainable Development (SD), models, indicators and principles of Sustainability. Water conservation- Rain water harvesting, Watershed management. Population Growth, variation among nations, Population explosion, Family Welfare Programme; Environment and human health

Programme:	B.Tech.	Semester :	II
Name of the	Physics-II Lab	Course Code:	SOE-B-FY203
Course:			
Credits :	1	No of Hours :	30
Max Marks:	100		

Course Description:

This course deals with practical knowledge of basic physics including mechanics, optics and electronics.

Course Outcomes:

After Completion of the course Students will be able to:

CO Number	Course Outcome
CO1	Gain practical knowledge of mechanics
CO2	Aquire hands-on experience of optics experiments using laser.
CO3	Gain knowledge of measuring moment of inertia of fly wheel, acceleration due to gravity, frequency of AC signal, and viscosity of different liquids.

Syllabus:

At least ten experiments are to be performed by each student from the following list.

- 1. Determination of wavelength of given light by Newton's ring method.
- 2. Determination of grating element of diffraction grating using He-Ne laser source.
- 3. Determination of NA (Numerical Aperture) of an optical fiber.
- 4. Determination of e/m by Thomson method.
- 5. Determination of AC frequency using Sonometer.
- 6. Determination of energy gap of semiconductor diode.
- 7. To study solar cell characteristics.
- 8. To study the characteristics of PN junction diode.
- 9. To determine the divergence of laser beam.
- 10. To study the Hall effect.
- 11. To study the transistor characteristics in CE mode.
- 12. Determination of wavelength of He-Ne laser using diffraction grating.

Department of Civil Engineering

Programme:	B. Tech	Semester:	II
Name of the Course:	Introduction to Artificial Intelligence	Course Code:	SOE-B-FY208
Credits :	3	No of Hours:	45
Max Marks:	100		

Course Description:

In this course, students will study the most fundamental knowledge for understanding AI. The course will introduce some basic search algorithms for problem solving, Computing methods like Hard computing & soft computing, various soft computing approaches for learning through neural network. Hands-on with Python programming will enable students to develop AI applications.

Course Outcomes:

On successful completion of this course, students will be able to:

CO Number	Course Outcome
CO1	Understand the basics of Artificial Intelligence.
CO2	Understand overview of problem solving through search methods.
CO3	Understand the difference between Hard and Soft computing approaches.
CO4	Understand basic Neural network structure and activation functions.
C05	Understand how to implement the AI concepts using Python programming.

Syllabus:

Unit-I Overview and search techniques

Introduction to AI, AI Definition, Philosophy of AI, Related Fields: Robotics, Machine Learning, Data Science, Deep Learning, Applications: Self Driving Cars, Content Recommendation System, Video/Image processing.AI problem Solving and Games, A* Search.

Unit- 2 Machine Learning and Knowledge representation Odds and Probability:

Why probability matters, Various examples like card playing, Dice, Uncertainty in real life like train ticket confirmation. How to deal with uncertainty, Odds and Expected outcomes, Bayes Rule, Prior and Posterior odds: Basic Principles. Application areas of Bayes classification. Knowledge representation in AI, Types of Knowledge in AI

Unit-III: Advanced Topics in Machine Learning DATA PREPARATION:

Validation, Dimensionality, Missing, Values, Dimensionality, Encoding, Basics of confusion matrix Classification in Machine Learning, MNIST Data set identification, Supervised, Unsupervised and Reinforced Learning.

Unit-IV Introduction to Artificial Neural Network Neural Network Basics

Elements of Neural Network, Why Develop Artificial Neural Networks: Modelling Key features, How Neural networks are Built: Weights and Input, Activation and

Output: Identity Function, Step function, Sigmoid Function. Perceptron, Neural Network, Neural Network classifier. Advanced Neural network techniques: Convolutional Neural Network, Generative adversarial networks (GANs), Deep Learning: It's application on data processing.

Unit-V Application and Case Studies in AI Case study:

Auto Driving Cars, Smart Home and IoT Applications, Robotics, Mine Detections, Medical Diagnosis, Applications in multiple domains. Smart City, Implications of AI, Predicting the Future and Social Implications

Programme:	B.Tech	Semester :	II
Name of the	Written English	Course Code:	SOE-B-FY209
Course:	Communication		
Credits :	2	No of Hours :	30
Max Marks:	50		

Course Description

The purpose of the course is to acquire accuracy and clarity in written communication. It helps to develop written text of varying lengths and styles that communicate effectively accurately and appropriately across various situations.

Course Outcome

After Completion of the course Students will be able to:

CO Number	Course Outcome
CO1	Communicate by writing clearly and precisely without errors
CO2	Draft various business correspondence in correct styles and format
CO3	Prepare various forms of the report
CO4	Know the principles of effective written communication
CO5	Develop advance corporate writing skills

UNIT 1: Basics of Writing

An introduction to writing: Definition, Characteristics of effective writing, Principles of writings(7C's), Modes of Writing: Narrative, Descriptive, Argumentative, Expository.

UNIT 2: Grammar in Use

Sentence structure, Subject-Verb concord, Tenses, Voice, Narration, Identifying common errors in writings, Précis writings, Paragraph writings.

UNIT 3: Letter Writing

Types of letters, Elements of letters, Styles of letter writing, Basics of official correspondence, Preparation of Resume and Job application, Quotation, Order, Complaint letter.

UNIT 4: Report Writing

Characteristics of good report, Elements of report, Preparation and writings of report, Use of illustrations in reports, Preparation of Bibliography and References.

UNIT 5: Corporate Writing

Notice, Agenda and Minutes Writing techniques, Tenders, Advertising, Sales Letter

OP Jindal Knowledge Park, Punjipatra, Raigarh-496109 Department of Civil Engineering

Programme:	B. Tech.	Semester:	III
Name of the Course:	Surveying I	Course Code:	SOE-B-CE301
Credits :	4	No of Hours :	50
Max Marks:	100		

Course Description:

This subject emphasizes on the study of chain and compass surveying, linear and angular measurements, adjustment of closing error. Different methods of surveying and leveling, use of theodolite.

Course Outcomes:

Students will be able to:

CO Number	Course Outcome
CO 1	Determine the relative positions and elevations of ground points by
	applying different techniques.
CO 2	Set out various curves with the field problems.
CO 3	Gain and apply the knowledge of Tacheometry, various systems,
	instruments etc.

Syllabus

UNIT- I

Methods of Traversing: Definition, principles and classification of surveying, instruments for surveying, linear measurements, chain surveying principles, offsets, types of compass, measurement of directions and angles, meridians and bearings, local attraction, magnetic declination, traversing with a chain and compass, plotting of traverse, adjustment of closing error, principle and methods of plane table surveying.

UNIT-II

Leveling and Contouring: Principle and classification of leveling, bench marks, level computations, longitudinal and cross- sectional leveling, plotting the profile, characteristics of contours, methods of contouring, interpolation, contour gradient, contour maps.

UNIT- III

Theodolite Surveying: Principle of theodolite, linear and angular observations, traverses computations.

UNIT- IV

Tacheometery: Definitions, principles of stadia systems, instrument constants, substance and tangential systems of tacheometry, derivations of equation in three different cases. Construction and use of reduction tacheometers, errors in stadia surveying.

UNIT-V

Curve Setting: Types of curves, elements of a curve, setting out a simple horizontal curve, setting out a compound horizontal curve, checks on field work, reverse

curve, super elevation, deflection angles, transition curves, characteristics of transition curves, types of vertical curves, setting out vertical curves.

Text Books:

1. Surveying I and II, B.C. Punmia, A.K. Jain, Arun Jain, (2016), Laxmi Publications, Seventeenth Edition.

2. Surveying and Leveling, R. Subramanian, (2012), Oxford University Press, Second Edition.

3. Surveying (Vol. II & III), R. Agor, (1995), Khanna publications, Delhi, First Edition.

Reference Books:

1. Surveying (Vol. II & III), K.R. Arora, (1993), Standard Book House, Delhi.

2. Surveying (Vol. I & II), S.K. Duggal, (2004), Tata McGraw Hill.

3. Surveying (Vol. I & II), T.P. Kanetkar, (1988), Pune Vidyarthi Griha Prakashan, Pune.

4. Surveying (Vol. I & II), C. Venkataramaih, (2011), Universitires Press Hyderabad.

6. Plane and Geodetic Surveying for Engineers Volume 2 Higher Surveying, D.S.CLARK, (1 January 2004), Paperback publications, 6th Edition (revised by J. E. Jackson).

Assessment:

Assessment includes attendance, class work, tutorials, assignments, quizzes, exams.

<u>CO-PO & PSO Correlation</u>

OP Jindal Knowledge Park, Punjipatra, Raigarh-496109 Department of Civil Engineering

Programme:	B. Tech.	Semester :	III
Name of the	Strength of	Course Code:	CIE2102
Credits :	4	No of Hours :	50
Max Marks:	100		

Course Description

The subject of strength of materials involves analytical methods for determining the strength, stiffness and stability of the various load carrying structural members. A thorough understanding of the underlying principles is useful to civil engineers with several applications.

Course Outcome:

Students will be able to:

CO Number	Course Outcome
CO 1	Determine the stresses and strains in the members subjected to axial, bending and torsional loads. The basic concepts of Mechanics of Solids are clear to students.
CO 2	By knowing the stresses and strains developed in a structure, the student is able to find out at which point structure is strong and at which point it requires strengthening.
CO 3	The bending moments and shear force at any cross section of the beam can be easily found out with the help of BMD and SFD, which enables the student now to study and design the beam.
CO 4	Knowing the analysis of dams and retaining walls, the stresses at different points of dam and retaining can be known and these structures can be designed.
CO 5	The student is now ready to learn designing of different structures. The base of study of structural analysis and designing is formed, which are the subjects of higher semesters.

Syllabus

UNIT- I

Introduction to Engineering Mechanics-Concept of Force system, reaction; Types of supports; General equilibrium equations; Equilibrium of a member; Concept of free body diagrams; Centre of gravity; Moment of Inertia; Concept of friction and frictional forces with some simple examples.

UNIT- II

Simple Stress and Strains- Introduction; Concept of stress and strain; Stressstrain curves for ductile, brittle materials; Generalized Hooke's law, Stress-strain diagram of ductile and brittle material, statically determinate and indeterminate problems, compound and composite bars, thermal stresses. Elastic constants, relations between various elastic constants and its use; Lateral strain, volumetric strain, poisons ratio; Stress and strains in thin cylinders subjected to internal pressures.

UNIT-III

Complex Stress and Strains-Introduction; Normal stress, tangential stress; Rectangular block subjected to normal stress along and across two planes,

combination of normal and tangential stress; Concept of principal stress and its computation; Mohr's circle; Principal strains, computation of principal stresses from the principal strains.

UNIT- IV

Shear Force and Bending Moment Diagrams-Introduction to the concept of reaction diagrams- shear force and bending moment; Role of sign conventions; Types of load, beams, supports; Shear force and bending moment diagrams: simply supported, overhang and cantilever beams subjected to any combination of point loads, uniformly distributed and varying load, and moment; Relationship between load, shear force and bending moment; Different methods for plotting a bending moment and shear force diagrams.

UNIT-V

Columns and Combined Stresses- Stability of Columns; Buckling load of an axially loaded columns with various end conditions; Euler's and Rankine's formula; Columns under eccentric load, lateral load. Kern of rectangular sections, middle third rule, stability of gravity dams & retaining walls.

Programme:	B. Tech.	Semester :	III
Name of the	Introduction to Python	Course Code:	SOE-B-CE303
Credits :	3	No of Hours :	45
Max Marks:	100		

Course description:

This course introduces the Object-Oriented Programming to the undergraduate students of Civil Engineering. The course includes simple programs in Python for Civil Engineering Problems in structural Engineering, Fluid Mechanics, Soil Engineering and Transportation Engineering.

Outcomes:

The students will be able to

CO Number	Course Outcome
CO 1	Use simple functions in python
CO 2	Use libraries in python
CO 3	Write simple code in python for civil engineering problems

Syllabus

Unit I – Introduction to Python:

History, Features, Programming Concepts, Identifiers, Keywords, Statements and Expressions, Variables, Operators, Data Types, Indentation, Comments, Reading Input, Output, Type Conversions. Essential Python libraries like numpy, pandas, matplotlib, SciPy, scikit-learn, statsmodels, The python interpreter, IPython Basics, Python Language Basics.

Unit II – Built in Data Structures

Functions, Array-Oriented Programming with Arrays, Expressing Conditional Logic as Array Operations, File Input and Output with Arrays, :If-else, Loops – For, While; break continue, String manipulations –Basic String Operations, Accessing Characters in String by Index Number, String Slicing and Joining, Formatting Strings, immutability, string functions and methods.

Unit III – Python Building Blocks:

Defining, invoking functions, passing parameters, Lists – list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters, Tuples - tuple assignment, tuple as return value, Sets - Concept of Sets , creating, initializing and accessing the elements, operations, Dictionaries - Concept of key-value pair, creating, initializing and accessing the elements in a dictionary, operations and methods, Modules - Importing module, Math module, Random module, Packages.

Unit IV – Python for Analytics:

NumPy – Introduction, creating objects, operations on objects, Functions, files and the operating system, NumPy basics, arrays and vectorized computations,The NumPyandarray: A Multidimensional Array Object, Arithmetic with NumPy Arrays, Boolean Indexing, Transposing Arrays and Swapping Axes, Universal Functions: Fast Element-Wise Array.

OP Jindal Knowledge Park, Punjipatra, Raigarh-496109 Department of Civil Engineering

Introduction to Pandas Data Structures, Essential Functionality, Summarizing and Computing Descriptive Statistics, Functions Pandas – Introduction, series, DataFrame, Panel, operations and statistical functions,

SciPy – Introduction, Basic functionality, Cluster, Constants, Statistical functions, plotting with Matplotlib.

Unit V – Introduction to Machine Learning:

Mean, Median, Mode, Standard Deviation, Data Distribution and Normal Data Distributions, Regression – Linear, Polynomial, Multiple regression, Scale, Train/Test – Evaluate Model, operations on Data Sets.

Text books:

1. Python Crash Course: A Hands-On, Project-Based Introduction to Programming, Eric Matthes, (20 November 2015), No Starch Press, 2nd Edition.

Max Marks:	100		

Course Outcome:

Students will be able to:

CO Number	Course Outcome
CO 1	Use the mathematical concepts of Discrete and Continuous Probability Distributions to formulate and solve the real life problems.

Syllabus Outline

Unit: 1

Functions of a complex variable, Limits, continuity and differentiability of functions of complex variables, Cauchy-Riemann equations, Analytic functions, Harmonic functions, Application to fluid flow problems, Complex integration, Cauchy theorem, Morrera's theorem and Cauchy integral formula.

Unit: 2

Expansion in Taylor's and Laurent's series, Singularities and their classifications, Residues, Cauchy-Residue's theorem and Contour Integration

Unit: 3

Laplace Transform, Definition & Existence, Transform of elementary functions, Properties of Laplace transform, Transform of derivatives & integrals, Multiplication by tⁿ, Division by t, Evaluation of integrals, Inverse Laplace Transform, Convolution theorem, Unit step function, Unit impulse function, Periodic functions, Application to solution of ordinary differential equations.

Unit: 4

Fourier Integrals and Fourier Transform, Definition, Properties of Fourier transform, Inverse Fourier transform, Fourier sine and cosine transforms, Application of Fourier transform to solution of ordinary differential equations.

Unit: 5

Random variables, Expectation, Mean, Standard Deviation of Discrete & Continuous Random Variables, Probability Distributions, Discrete & Continuous Probability Distributions, Binomial, Poisson and Normal distributions.

OP Jindal Knowledge Park, Punjipatra, Raigarh-496109 Department of Civil Engineering

Programme:	B. Tech.	Semester :	III
Name of the	Fluid Mechanics	Course Code:	SOE-B- CE304
Course:			
Credits :	4	No of Hours :	50
Max Marks:	100		

Course Description

This course covers the basics of static and dynamic fluids, necessary aspects of fluid flow, mass and energy transfer, open and closed conduit flow, simple devices to measure different parameters of flow. The course imparts knowledge of various hydraulic devices and machines like pumps and turbines.

Course Outcomes:

Students will be able to understand:

CO Number	Course Outcome
CO 1	Different types of fluid, their physical properties and applications.
CO 2	Various flow types, their occurrence in practice and analysis of them.
CO 3	Application of the principles of hydraulics for getting various energy conversions and their use.
CO 4	About hydraulic machines like turbines and pumps, their classifications and applications.
CO 5	Dimensional analysis, similitude, models etc.

Syllabus

UNIT I

Fluid Statics: Introduction and scope of fluid mechanics, classification of fluids. Physical properties of fluids like density, specific gravity, specific weight, specific volume, surface tension and capillarity, viscosity, incompressibility and bulk modulus. Fluid classification, fluid static pressure, Pascal's law, pressure variation for incompressible fluids, atmospheric pressure, absolute pressure, gauge pressure and vacuum pressure, manometer, hydrostatic pressure on submerged surface, force on a horizontal, inclined and vertical submerged plane surface. Buoyancy and flotation, Archimedes' principle, stability of immersed and floating bodies, determination of metacentric height.

UNIT II

Fluid Kinematics: Introduction, description of fluid flow, classification of fluid flow. Acceleration of fluid particles, flow rate and continuity equation, differential equation of continuity. Flow through pipes, flow through open channels, laminar and turbulent flows, rotational and irrotational flow.

UNIT III

Fluid Dynamics: Introduction, Euler's equation, Energy equation, Bernoulli's equation, applications of Bernoulli's equation, analysis of finite control volumes and its application to siphon, venturi meter, orifice, mouthpiece.

UNIT IV Hydraulic Machines:

OP JINDAL UNIVERSITY OP Jindal Knowledge Park, Punjipatra, Raigarh-496109 Department of Civil Engineering

Turbines: Classification of reaction, impulse, outward flow, inward flow and mixed flow turbines, Francis, Kaplan and Pelton wheel turbines. Physical description, principle of operation and governing of hydraulic turbines.

Pumps: Centrifugal pump, principles and classification, blade angles, velocity triangle, efficiency, specific speed, characteristics of performance curves. Reciprocating pump, principles of working, slip, work done, effect of acceleration, frictional resistance and separation, introduction to jet pump and submergible pump.

UNIT V

Dimensional Analysis and Similitude: Dimension reasoning, dimensional homogeneity, dimensional analysis using Rayleigh's method, Buckingham π -theorem, significance and use of dimensionless numbers in experimental investigation, geometric similarity, dynamic similarity, kinematic similarity, model testing-model laws, undistorted and distorted models.

Programme:	B. Tech.	Semester :	III
Name of the	Disaster Management	Course Code:	SOE-B-CE305
Course:			
Credits :	1	No of Hours :	30
Max Marks:	100		

Course Description

This course gives introduction to natural and environmental disasters, their behavior and possible impacts. Principally aimed to introduce the students to various methods of mitigating damage during disasters.

Course Outcomes:

Students will be able to understand

CO 1	Disaster and its nature.
CO 2	Impact and hazard assessment.
CO 3	Disaster preparedness and mitigation.
CO 4	Use of construction technology for disaster management.
CO 5	Short term and long term relief measures.

Syllabus

UNIT I

Nature of disasters, natural and other disasters, earthquakes, floods, draught, cyclones, fire, epidemics and pandemics and other environmental disasters.

Unit II

Behaviour of structures in disaster prone areas, disaster zoning, hazard assessment, Environmental Impact Assessment (EIA).

Unit III

Methods of mitigating damage during disasters, disaster preparedness.

Unit IV

Management systems during disasters, construction technology for mitigation of damage of structures.

Unit V

Short-term and long-term relief measures.

Text Books:

- 1. Earthquake Engineering damage assessment and structural design, S.F. Borg (August 1, 1988), World Scientific Publishing Co, 2nd revised edition.
- 2. Disasters and development, Cuny F, (October 13, 1983), Oxford University Press Publication.

Programme:	B. Tech.	Semester:	III
Name of the	Surveying Lab	Course Code:	SOE-B-CE306
Credits:	1	No of Hours :	30
Max Marks:	50		

Description:

This course emphasizes on hands-on practice on various survey instruments, linear and angular measurements, data generation and processing and adjustment of closing error.

Course Outcomes:

Students will be able to:

CO Number	Course Outcome
CO 1	Use different survey instruments.
CO 2	Operate plane table, theodolite and tachometer as per standard procedure.
CO 3	Laid down curve layout on actual ground.

List of Experiments

(At least ten experiments are to be performed by each student)

- 1. Plotting of an area by chain survey.
- 2. Plotting of an area by compass traversing.
- 3. Plane table survey by methods of radiation and intersection.
- 4. Traversing by plane table survey.
- 5. Differential levelling.
- 6. Profile levelling for roads (Longitudinal section and cross sections).
- 7. Measurement of horizontal and vertical angles by using theodolite.
- 8. Determination of tacheometric constants.
- 9. Setting out of a curve by using a tachometer.
- 10. Setting out of a curve by ordinates or offsets from long chord.
- 11. Setting out of a horizontal transition curve by theodolite.
- 12. Setting out of a curve by Rankine's method.

Note: Drawings to be prepared with the help of computer.

Recommended Books:

1. Surveying I and II, B.C. Punmia, A.K. Jain, Arun Jain, (2016), Laxmi Publications (Seventeenth Edition).

2. Surveying and Leveling, R. Subramanian, (2012) Oxford University Press, Second Edition.

3. Surveying (Vol. II & III), R. Agor, (1995), Khanna publications, Delhi, First Edition.

Assessment:

Assessment includes Attendance, Performance, Record work and Exams.

Programme:	B. Tech.	Semester :	III
Name of the Course:	Fluid Mechanics Lab	Course Code:	SOE-B-CE307
Credits :	1	No of Hours :	30
Max Marks:	50		

Course Description

The course covers different pressure measuring devices, metacentric height, verification of Bernoulli's Theorem, pitot tube, venturi meter, orifice meter, impact of jet through nozzle, coefficient of discharge through triangular notch and rectangular notch, Reynolds's experiment, friction factor for different pipes, loss coefficients for different pipe fittings, viscosity of fluid by viscometer, efficiency of centrifugal/reciprocating pump and efficiency of impulse/reaction turbine.

Course Outcomes Students will be able to:

CO Number	Course Outcome
CO 1	Use of different pressure measuring devices.
CO 2	Determine of metacentric height and applications of various principles.
CO 3	Know the application of pitot tube, venturi meter, orifice meter and jet
	through nozzle.
CO 4	Know the application of different hydraulic machines like pumps and
	turbines.

List of laboratory experiments:

(At least ten experiments are required to be performed by each student).

- 1. To measure pressure with the help of different pressure measuring devices.
- 2. To determine metacentric height of floating body.
- 3. To verify Bernoulli's theorem experimentally.
- 4. To measure the velocity of flow using pitot tube.
- 5. To determine the coefficient of discharge of venturi meter.
- 6. To determine the coefficient of discharge of orifice meter.
- 7. To determine the impact of jet through nozzle.
- 8. To determine the coefficient of discharge through open channel flow over a triangular notch.
- 9. To determine the coefficient of discharge through open channel flow over a rectangular notch.
- 10. To determine the different types of flow patterns by Reynolds's experiment.
- 11. To determine the friction factor for different pipes.
- 12. To determine the loss coefficients for different pipe fittings.
- 13. To determine the viscosity of fluid by viscometer (Redwood or Saybolt).
- 14.To determine efficiency of centrifugal/reciprocating pump.
- 15. To determine efficiency of impulse/reaction turbine.

Equipment/Machines/Instruments/Tools/Software Required:

- 1. Bourden's tube pressure gauge, manometers.
- 2. Bernoulli's theorem apparatus.
- 3. Various notches, orifices, mouthpieces.

Department of Civil Engineering

- 4. Model of ship.
- 5. Turbines and pumps.

Recommended Books:

Programme:	B. Tech.	Semester :	III
Name of the	Civil Engineering	Course Code:	SOE-B-308
Credits :	1	No of Hours :	20
Max Marks:	50		

Course Description:

Integrated Approach of Planning of Buildings, salient features of a building, site integration, and benefits of building. Line plan and its development, elevation, section. Building rules and bye-laws (as per National Building Code of India). The necessity of building rules and bye-laws, plot sizes, road widths, open spaces, floor area ratio (FAR), floor space index (FSI).

Course Objectives:

Students will be able to:

СО	Course Outcome
Number	
CO 1	The planning process of building and bye-laws.
CO 2	Detailing of building drawing.
CO 3	Implementation of building drawing in AutoCAD.
CO 4	Principles of perspective drawings.

Syllabus

(The students are required to complete any two exercises from each lab work using Auto CAD).

Lab Work I

Introduction: Civil engineering drawing and its importance.

Doors and Windows: Definition of technical terms, installation of doors and window frames, and their size specifications, fixtures, and fastenings.

- **1.** To draw section and elevation of the flush shutter, panelled shutter doors and windows.
- **2.** To draw section and elevation of fully glazed, half glazed, half glazed and half paneled doors and windows.
- **3.** To draw section and elevation of M.S. collapsible door, rolling steel shutter.

Lab Work II

(Anyone one from Foundation and staircase each)

- Foundation: Types of foundation, detailing of foundation components.
- **1.** To draw different types of footing.
- **2.** To draw the foundation details of internal and external walls.
- Staircase: Types and details of the stair case.
- **1.** To draw detailing of Dog-Legged staircase.
- 2. To draw detailing of the Straight staircase.

Lab Work III

Residential Buildings: Aspects, Prospects, Circulation, Grouping, Roominess, Economy, Elegance, Furniture requirements, Flexibility, Privacy. Municipal and national building code regulations and Bye-laws for residential buildings.

OP JINDAL UNIVERSITY OP Jindal Knowledge Park, Punjipatra, Raigarh-496109 Department of Civil Engineering

- **1.** To draw the working plan, elevation, and section of the single storey residential building (Load Bearing Structure).
- **2.** To draw the working plan, elevation and section of single-storey residential building (Framed Structure).
- **3.** To draw the working plan, elevation and section of double-storey residential building (Framed Structure).

Lab Work IV

Public Buildings: Site selection and requirements of different public buildings drawing typical line plans of such public buildings.

- **1.** To draw the line plan of a primary school building.
- **2.** To draw the line plan of a hostel building.
- **3.** To draw the line plan of a hospital building.

Lab Work V

Perspective: Elements of Perspective Drawing (single and double point) **General activities**

- **1.** To draw the perspective view of simple blocks and combinations.
- **2.** Collection and interpretation of brochures/information/literature for housing schemes.
- **3.** To draw the perspective view of the building.

Text Books:

- **1.** A course in Civil Engineering Drawing, V.B. Sikka, S.K. Kataria and Sons, (2015), Eleventh Edition.
- **2.** Civil Engineering Drawing and Design, D.N. Ghose, CBS Publisher, (2015), Second Edition.
- 3. AutoCAD Release 2012 2D and 3D Design A. Yarwood. (Pearson Educations).

Reference Books:

- **1.** Building Construction, Sushil Kumar, Standard Publisher and Distributors, (2010), Tenth Edition.
- **2.** Building Construction, Punmia B.C, Jain, Ashok Kumar and Jain, Arun Kumar, Laxmi Publications, (2008), Tenth Edition.
- **3.** National Building Code, BIS, New Delhi.
- **4.** Building Drawing, Shah M.H, and Kale C.M, Tata McGraw Hill New Delhi, (2001), Fourth Edition.
- **5.** Planning and Designing Building, Y.S.Sane, Poona, Allied Book Stall, (1975), Third Edition.

Assessment

Assessment will be based on a combination of assignments, quizzes, project work and exams.

Programme:	B. Tech.	Semester :	IV
Name of the Course:	Theory of Structures -I	Course Code:	SOE-B-CE401
Credits :	4	No of Hours :	50
Max Marks:	100		

Course Description

This course covers the basics of structural analysis with the central focus on energy methods. Deflections, effect of sinking of supports, rolling loads and influence lines, strain energy and analytical interrelations of them with different methods will be covered. The subject also covers analysis of determinate and indeterminate structures.

Course Outcome:

Students will be able to:

CO Number	Course Outcome
CO 1	Analyze determinate and indeterminate structures.
CO 2	Apply various energy methods for analyzing different structures like bridges of suspension and arches.

Syllabus:

UNIT- I

Determinate Structures- Introduction to determinate and indeterminate structures, static indeterminacy, external and internal indeterminacy, rules for determining degree of indeterminacy, degree of freedom per node, kinematic indeterminacy. pin jointed determinate space trusses, distinction between determinate and indeterminate space trusses and simple and complex space trusses, Analysis of simple and determinate space trusses, method of tension coefficient.

UNIT-II

Fixed and Continuous beams: Statement of Clapeyron's theorem of three moments, analysis of fixed and continuous beams for shear force and bending moment- deflection of fixed beams - effect of sinking of supports.

UNIT- III

Slope and Deflection - Moment curvature relation, the elastic curve, relation between loading, SF, BM, slope and deflection, deflection and slopes of statically determinate beams by double integration method, Macaulay's method, moment rea method, basics of conjugate beam method.

UNIT-IV

Rolling Loads and Influence Lines- Introduction to rolling loads - concept of influence lines - influence lines for reaction, shear force and bending moment in simply supported beams - influence lines for forces in trusses – analysis for

different types of rolling loads - single concentrated load - several concentrated loads - uniformly distributed load shorter and longer than the span, absolute maximum bending moment.

UNIT-V

Strain Energy- Strain energy due to axial load, bending, shear and torsion, Castigliano's theorems for deflection, Betti's theorem - Maxwell's law of reciprocal deflections, unit load and strain energy method for determination of deflections of statically determinate beams - pin-joined trusses and rigid frames.

Text Books:

OP Jindal Knowledge Park, Punjipatra, Raigarh-496109 Department of Civil Engineering

Programme:	B. Tech.	Semester :	IV
Name of the	Engineering Hydrology	Course Code:	SOE-B-CE402
Course:			
Credits :	4	No of Hours :	50
Max Marks:	100		

Course Description:

The course serves as an introduction to the field of engineering hydrology. It covers fundamentals such as the hydrological cycle, catchment, losses, hydrographs and hyetographs. Determination rainfall intensity and hyetographs, peak flow estimation, hydrograph estimation, groundwater hydrology and modeling, and drought risk analysis / yield hydrology.

Course Outcomes

Students will be able to understand

CO Number	Course Outcome
CO 1	Essential components and function of the hydrologic cycle including precipitation, evaporation/evapotranspiration, overland flow and surface storage, groundwater flow and storage, and channel flow, storm water runoff and water quality.
CO 2	Computation of hydrologic mass balance in a closed basin.
CO 3	Unit hydrographs analysis.
CO 4	Ground water resource, contamination of ground water and unified presentation of ground water hydrology.

Syllabus:

UNIT I

Introduction: Definition and scope, hydrology in relation to water resources development,

Hydrologic cycle, the necessity for hydrologic data, the global water budget, practical applications, water balance equation.

Hydrometeorology: Introduction, constituents of atmosphere, the weather and the atmosphere, the general circulation, air masses and fronts, climate and weather seasons in India.

UNIT II

Precipitation: Forms of precipitation, measurement of precipitation, recording and non-recording type of rain gauges, typical and record rainfall data, errors in measurement of rainfall. Location of rain gauge stations, analysis and interpretation of rainfall data, average depth of rainfall over area, most modern method of measurement of rainfall, Probable Maximum Precipitation (PMP).

UNIT III

Infiltration and Run off: Introduction, factors affecting infiltration, measurement of infiltration, infiltrometers, infiltration equations, infiltration indices, effect of infiltration on runoff and recharge of ground water, runoff, components of runoff, estimation of runoff, calculations by infiltration method, rainfall-runoff relationship, rational method of estimating runoff, basin yield.

OP JINDAL UNIVERSITY OP Jindal Knowledge Park, Punjipatra, Raigarh-496109 Department of Civil Engineering

UNIT IV

Hydrograph Analysis: Introduction, characteristics of the hydrograph, effect of rainfall distribution on the shape of hydrograph, hydrograph separation, unit hydrograph, derivation of the unit hydrograph, storms-hydrograph, applications of unit hydrograph, direct runoff hydrograph, S-hydrograph hyetograph and isohyets.

UNIT V

Evaporation and Evapotranspiration: Introduction, evaporation process, factors affecting evaporation, estimation of evaporation, measurement of evaporation, reducing evaporation from water surfaces, transpiration, Evapotranspiration

Ground Water: Introduction, occurrence of ground water, aquifer parameters, ground water movement, Darcy's Law, permeability, steady and unsteady flow to wells in confined and unconfined aquifers.

Programme:	B. Tech.	Semester :	IV
Name of the Course:	Transportation Engineering- I	Course Code:	SOE-B-CE403
Credits :	4	No of Hours :	50
Max Marks:	100		

Course Description:

This course emphasizes on the basics of highway elements and their design including practical applications. Further, it gives an idea of materials being used in the modern road construction techniques and practices. It also covers the transportation planning, traffic studies and airport planning.

Course Outcomes:

Students will be able to understand

CO Number	Course Outcome
CO 1	Highway planning and design.
CO 2	Different aspects of traffic engineering.
CO 3	Application of highway construction material.
CO 4	Design of pavements.
CO 5	The planning process of airport.

SYLLABUS

UNIT I

Principles of Highway Planning: Elements of transportation engineering, different modes of transportation, road development and planning in India, requirements of highway alignment, engineering surveys for highway location, maps and drawing. **Geometric Design:** Cross section elements of horizontal and vertical alignment.

Highway drainage, surface and subsoil drainage, geometry of hill roads, curve layout.

UNIT II

Traffic Engineering: Introduction to traffic flow theory, PIEV theory, speeddensity, speed-flow and flow-density relation, data collection techniques for traffic parameters and delay studies, parking facilities and their uses. Traffic control devices, prevention of road accidents, rotary intersection, highway lighting,

Highway Materials: Behavior of highway materials, properties of sub grade and pavement component materials. Tests on sub grade soil, aggregate and bituminous materials, I.R.C. recommendations, MoRTH recommendations.

UNIT III

Pavement Design: Study of flexible and rigid pavements, basic concepts of pavement analysis and design. Stresses in rigid pavements. I.R.C. recommendations, ideal pavement or perpetual pavement design method.

UNIT IV

Pavement Construction Techniques and Quality Control: Types of Pavements water bound macadam, bituminous and cement concrete pavements. Joints in cement concrete pavements, pavement failures. Innovative materials in pavements.

UNIT V

Airport Planning: Definition of terms related to airport engineering, factors affecting site, selection, obstructions, various surveys for site selection, zoning laws. Classification of obstructions runways orientation, basic runway length and its corrections. Geometric design of runway, runway configuration, taxiways layout, exit taxiways.

Airport Engineering: Brief history of air transport: Aircraft characteristics. Imaginary surfaces, Approach zone and turning zone. Airport capacity, factors controlling taxiway layout, geometric design standards for taxiway holding aprons, Wind- rose diagram, Structural design of runway pavements. Trend growth of Domestic Air Traffic in India, Air Cargo, Terminal area, building area, parking area, apron, hanger typical airport layouts. Design of flexible and rigid runways as per FAA procedure, Specifications for the different layers of runway and taxiway pavements, Pavement management systems for runway pavements. ATC Towers.

Programme:	B. Tech.	Semester :	IV Sem
Name of the Course:	Numerical Methods and	Course Code:	SOE-B-MA401
	Computing		
Credits :	3	No of Hours :	45
Max Marks:	100		

Course Outcomes:

Students will be able to

CO Number	Course Outcome
CO 1	Solve the problems using finite element method.
CO 2	Evaluate the engineering problems using different optimization techniques.
CO 3	Obtain the numerical solution of ordinary differential equations.
CO 4	Fit the linear and non linear curves to the tabulated data.

Syllabus

Unit I

Finite Element Method: Introduction, history and applications, finite element formulation using minimum potential energy principle, assembly of global stiffness matrices, element strain and stress, spring element, bar and beam elements.

Unit II

Introduction to Evolutionary Algorithms: Introduction to Optimization: Engineering application of optimization, statement of an optimization problem, optimal problem formulation, classification of optimization problem, single variable optimization algorithm, bounding phase method, dual simplex method.

Unit III

Introduction to neural networks: Optimization algorithms for solving constrained optimization problems, direct methods, penalty function methods, engineering applications of constrained and unconstrained algorithms, simulated annealing, neural-network based optimization.

Unit IV

Numerical Solution of Ordinary Differential Equations: Numerical Solution of Ordinary Differential Equations, Picard's Method, Taylor's Series Method, Euler's Method, Euler's Modified Method, Range-Kutta Methods, Predictor-corrector Methods, Milne's Method, Adams-Bashforth Method. C Programming of Euler's and Runge-Kutta method of order 4.

Unit V

Algebraic Eigen Value Problem:

Introduction, Classification of numerical computation methods, Theorems, Power Methods, Inverse Iteration Method, Generalized Eigen Value Problem, Jacobi Method.

Text Books:

- 1. Engineering Optimization: Theory and Practice, S. S. Rao, (2009), John Wiley & Sons, Fourth Edition.
- 2. Optimization for Engineering Design: Algorithms and Examples, K. Deb, (2012), Prentice Hall India Learning Private Limited, Second Edition
- 3. Numerical Methods in Engineering & Science with Programs in C, C++ & MATLAB, B. S. Grewal, (2013), Khanna Publishers, Eleventh Edition.
- Numerical Methods for Scientific and Engineering Computation, M. K. Jain, S. R. K. Iyengar, R. K. Jain, (2007), New Age International (P) Limited, Fifth Edition.

Reference Books:

- 1. Introduction to Evolutionary Algorithms, X. Yu, M. Gen, (2012), Springer.
- 2. Higher Engineering Mathematics, B. Ramana, (2017), McGraw Hill Education, First Edition.
- 3. Numerical Methods for Scientists and Engineers, K. S. Rao, (2007), Prentice Hall India Learning Private Limited, Third Edition.

Assessment:

Assessment includes attendance, performance, record work and exams.

Programme:	B. Tech.	Semester :	IV
Name of the Course:	Surveying-II	Course Code:	SOE-B-CE404
Credits :	4	No of Hours :	50
Max Marks:	100		

Course description:

This course emphasizes on the aspects of triangulation. Further it gives a fair idea of computational errors and observations in survey work. It also covers the total station surveying, photographic, aerial and hydrographic surveying

Course Outcomes:

Students will be able to:

CO Number	Course Outcome
CO 1	Deal with the various aspects of Triangulation.
CO 2	Evaluate computational errors and observations.
CO 3	Work in actual surveying field with total station.
CO 4	Apply the knowledge of Tacheometry, various systems, instruments etc.
CO 5	Understand the concepts of photographic and aerial surveying.
CO 6	Understand the concepts of hydrographic surveying.

Syllabus

UNIT I

Triangulation: Principle and classification of triangulation system, triangulation chains, strength of figures, station marks and signals, satellite station, intersected and resected points.

Field Work: Reconnaissance, intervisibility of stations, angular measurements, base line measurements and its extension, adjustment of field observations and computation of co-ordinates.

UNIT II

Total Station: Components of total station, basics of total station, setting of instrument, linear measurements, horizontal and vertical angle measurements, traversing, differential leveling, contouring and earthwork measurement, extraction of data to computer, interpretation of data, use of survey data for drawing preparation.

UNIT III

Total Station: Mini projects using total station (Outstation survey camp)

1. Profile surveying of road project (2 days).

2. Contour topographical mapping (2 days).

UNIT IV

Photographic and Aerial Surveying: Photo theodolite, principle of the method of terrestrial photogrammetry, stereo photogrammetry, aerial surveying, scale and distortion of the vertical and tilted photograph, comparison between air photograph and map, study of GPS, GIS and Remote Sensing.

UNIT V

Hydrographic Surveying: Introduction, shore line survey, soundings methods, gauges, equipment required for hydrographic surveying, sounding party, methods of locating soundings, reduction of soundings and plotting of soundings, problems related to hydrographic surveying.

Text Books:

- 1. Surveying I and II, B.C. Punmia, A. K. Jain, Arun Jain, (2016), Laxmi Publications, Seventeenth Edition.
- 2. Surveying (Vol. II & III), R. Agor, (1995), Khanna publications, Delhi, First Edition.

References Books:

- 1. Engineering Surveying Technology, T.J.M Kennie, and G Petrie. (1990), Blackie & Sons Pvt. Ltd., London.
- 2. Solving Problems in Surveying, A. Bannister and R. Baker, (1994), Longman Scientific Technical, U.K.
- 3. Surveying (Vol. II & III), K.R. Arora, (1993), Standard Book House, Delhi.
- 4. Surveying (Vol. I & II), T.P. Kanetkar, (1988), Pune Vidyarthi Griha Prakashan, Pune.
- 5. Surveying (Vol. I & II), C. Venkataramaih, (2011), Universitires Press, Hyderabad.

Assessment:

Assessment will be based on a combination of attendance, class work, tutorials, assignments and exams.

Programme:	B. Tech.	Semester :	IV
Name of the Course:	Theory of Structures Lab	Course Code:	SOE-CE-405
Credits :	2	No of Hours :	30
Max Marks:	50		

Course Description

The course covers flexural rigidity of beams, verification of Maxwell's theorem, deflection of curved beams, analysis of determinates and indeterminate beams, determinate pin-jointed frames, determinate rigid frames and multistoried rigid frame using STAAD.Pro.

Course Outcomes

Students will be able to understand:

CO Number	Course Outcome
CO 1	Determination of flexural rigidity of beams and verification of Maxwell's
	theorem.
CO 2	Evaluation of deflections of curved bars.
CO 3	Analysis of determinate and indeterminate beams.
CO 4	Analysis of determinate pin-jointed frames, determinate rigid frames and
	multistoried rigid frame.

List of Experiments:

(At least ten experiments are to be performed by each student)

- 1. To determine the flexural rigidity (EI) for a given beam.
- 2. To verify the Maxwell's theorem of reciprocal deflection.
- 3. To determine the vertical deflections of a variety of curved bars.
- 4. Analysis of determinate beams on a standard structural analysis package such as STAAD.Pro V8i.
- 5. Analysis of indeterminate beams on a standard structural analysis package such as

STAAD.Pro V8i.

- 6. Analysis of determinate pin-jointed frames on a standard structural analysis package such as STAAD.Pro V8i.
- 7. Analysis of indeterminate pin-jointed frames on latest version of a standard structural analysis package such as STAAD.Pro V8i.
- 8. Analysis of determinate rigid frames on latest version of a Standard Structural Analysis

package such as STAAD.Pro V8i.

9. Analysis of indeterminate rigid frames on latest version of a standard structural analysis

package such as STAAD.Pro V8i.

10. Analysis of multistoried rigid frame on latest version of a standard structural analysis

package such as STAAD.Pro V8i.

11. Analysis of multistoried pin-jointed frame on latest version of a standard structural analysis package such as STAAD.Pro V8i.

OP JINDAL UNIVERSITY OP Jindal Knowledge Park, Punjipatra, Raigarh-496109 Department of Civil Engineering

- 12. Analysis of industrial structure on latest version of a standard structural analysis package such as STAAD.Pro V8i.
- 13. Analysis of composite structure on latest version of a standard structural analysis package such as STAAD.Pro V8i.

Equipment/Machines/Instruments/Tools/Software Required:

- 1. Elastic properties of beam apparatus.
- 2. Maxwell's law of reciprocal deflection apparatus.
- 3. Universal frame with variety of curved bars.
- 4. Dial gauges for measuring deflections.
- 5. Weights and hangers to apply loads.
- 6. Latest release of software Package STAAD.Pro

Recommended Books:

- 1. Structural Analysis-I, II, S. S. Bhavikatti, (2010), Vikas Publishing, Fourth Edition.
- 2. Verification Manual of STAAD.Pro Software.

Assessment:

Assessment includes attendance, performance, record work and exams.

Programme:	B. Tech.	Semester :	IV Sem
Name of the Course:	Material Testing Lab and Studio	Course Code:	SOE-B-CE406
Credits :	1	No of Hours	30
Max Marks:	50		

Course Description:

This course gives a broad understanding of common materials related to civil engineering with an emphasis on the fundamentals of structure-propertyapplication relationships of the materials.

Course outcomes:

Students will be able to:

CO Number	Course Outcome						
CO 1	Reproduce the basic knowledge of mathematics and engineering in						
<u> </u>	Infuling the strength in tension, compression, shear, and torsion.						
CU 2	elements subjected to flexure.						
CO 3	Evaluate the impact of engineering solutions on the society and also will						
	be aware of contemporary issues regarding the failure of structures due to unsuitable materials						
CO 4	Reproduce the basic knowledge of mathematics and engineering in						
	finding the strength in tension, compression, shear, and torsion.						
CO 5	Identify, formulate, and solve engineering problems of structural						
	elements subjected to flexure.						

List of Experiments

(At least ten experiments are to be performed by each student)

- 1. Determination of fineness of cement by sieving method.
- 2. Determination of compressive strength of cement.
- 3. Determination of tensile strength of cement.
- 4. Determination of consistency of cement.
- 5. Determination of the initial and final setting time of cement.
- 6. Determination of soundness of cement.
- 7. Determination of specific gravity of cement.
- 8. Determination axial tensile strength of mild steel.
- 9. Determination impact value by Izod and Charpy of mild steel specimen material.
- 10. Determination of the Rockwell Hardness of mild steel specimen material.
- 11.Determination of compressive strength of wood: (a) Along with the fiber and (b) Across the fiber.
- 12. Determination of specific gravity of aggregates.
- 13. Determination of abrasion value of tiles.
- 14. Determination of impact value of tiles.
- 15. Determination of flexural strength of tiles.

OP Jindal Knowledge Park, Punjipatra, Raigarh-496109 Department of Civil Engineering

Material Studio: Students have to present a report and PowerPoint presentation and model / charts on topics given below.

1. Cement

(Contents/ chemical composition of cement, cement types, hydration of cement, chemical reaction, the structure of cement paste, consistency, and setting.)

 Aggregate. (Origin, types, sizes, uses, effects on workability, tests on aggregates)
Concrete.

(Constituents of concrete, transition zones, batching, mixing, curing)4. Workability of concrete.

- (workability of fresh concrete and harden concrete, testing on fresh concrete and harden concrete)
- Brick Masonry (Technical terms, bonds in brick work- English bond, Flemish bond, garden wall bond, raking bond, Dutch bond.)
- 6. Admixtures. (Details of admixture like its types, chemical composition, Uses of it)
- Structural Steel. (Structure and properties of steel, use of metals in civil engineering, reinforcement steel)

Recommended Books:

1. Concrete Manual: Laboratory Testing for Quality Control of Concrete, M.L Gambhir, (1992), Dhanpat Rai and Sons, Delhi, Fourth Edition.

2. Concrete Technology: Theory and Practice, M.S. Shetty and S.K.Jain, (2018), S. Chand Publication, Eight Edition.

Assessment:

Assessment includes attendance, performance, record work, and exams.

Credits :	2	No of Hours :	30
Max Marks:	50		

Course Description

This course covers the basics of highway materials, their test, and applications in the field. Abrasion value and attrition value of aggregates, the shape of aggregates, softening point of bitumen, ductility of bitumen, flash and fire point of bitumen, impact value of aggregates performs.

Course Outcome:

The student will be able to

CO Number	Course Outcome
CO 1	Identify the functional role of different materials of highway engineering.
CO 2	Understand the test procedures and recommended standards for limiting values of highway materials
CO 3	Understand the quality of various pavement materials and their suitability in highway construction

List of Experiments:

(At least ten experiments are to be performed by each student)

- 1. Determination of 10 percent fines value of aggregates.
- 2. Determination of crushing value of aggregates.
- 3. Determination of abrasion value of aggregates by Los Angele's machine.
- 4. Determination of attrition value of aggregates by Deval's attrition machine.
- 5. Determination of impact value of aggregates.
- 6. Determination of specific gravity and water absorption of aggregates.
- 7. Determination of softening point of bitumen.
- 8. Determination of ductility value of bitumen.
- 9. Determination of viscosity value of bitumen.
- 10. Determination of Flash and Fire point of bitumen.
- 11. Determination of Shape of aggregates(a) Elongation index (b) Flakiness index.
- 12. Determination of penetration value of bitumen.
- 13. Determination of the angularity index of aggregates.
- 14. Determination flash and fire point of bitumen.

15. Study of Marshal Stability test of bitumen.

Equipment/Machines/Instruments/Tools/Software Required:

- Standard penetrometer
- Ring and ball apparatus
- Los Angele's abrasion machine
- Deval's abrasion machine
- Ductility testing machine
- Tar viscometer
- Sieve shaker
- Standard I.S. sieves for fine and coarse aggregate

OP Jindal Knowledge Park, Punjipatra, Raigarh-496109 Department of Civil Engineering

- Length gauge
- Thickness gauge
- Crushing value cylinder and mould with plunger
- Aggregate impact testing machine
- Flash and fire point apparatus
- Hot air oven
- Water bath
- Marshall stability machine and with mould
- Proving ring and dial gauge
- Weighing balance up to 10 kg capacity

Recommended Books:

- 1. Principle and Practices of Highway Engineering, Kadiyali, (2005), Khanna Publishers, Delhi, Tenth Edition.
- 2. Highway Engineering, S. K. Khanna and C.E.G. Justo, (2015), Khanna Publishers, Delhi, Tenth Edition.
- 3. Air-port planning and Design, Khanna and Arora, (2017), Khanna Publishers, Delhi, Sixth Edition.
- 4. Principles of Transportation Engineering, Partha Chakroborty and Animesh Das, (2011), Prentice Hall India Learning Private Limited, Sixth Edition.

Assessment:

Assessment includes attendance, performance, record work, and exams.

Programme:	B. Tech.	Semester :	IV
Name of the Course:	Numerical Methods and Computing	Course Code:	MAT2208
Credits :	4	No of Hours :	50
Max Marks:	100		

Course Outcomes:

Students will be able to

CO Number	Course Outcome
CO 1	Numerically estimate the roots of algebraic and transcendental equations.
CO 2	Solve the system of linear algebraic equations by direct and iterative methods.
CO 3	Approximate the tabulated function by a polynomial.
CO 4	Find the derivatives and integrals of a tabulated function.
CO 5	Obtain the numerical solution of Ordinary Differential Equations.
CO 6	Fit the linear and non linear curves to the tabulated data.

Syllabus Outline:

Unit: 1 (Solution of algebraic and transcendental equations)

Roots of Algebraic and Transcendental Equations, Bisection, Regula- Falsi and Newton-Raphson Methods, System of linear algebraic equations, Consistency and Existence of Solutions, Direct Methods: Gauss Elimination and Gauss-Jordan Methods, Iterative Methods: Jacobi's, Gauss-Siedal & Successive Over Relaxation Methods. C Programming of Newton's iterative method.

Unit: 2 (Finite Differences and Interpolation)

Finite Differences and Interpolation, Interpolation with equally and unequally spaced points, Interpolation Formulae based on forward, backward, central and divided differences, Lagrange's Interpolation formula, Inverse Interpolation.

Unit: 3 (Numerical Differentiation and Integration)

Numerical Differentiation, Derivatives using Forward, Backward and Central Difference Formulae, Numerical Integration, Newton-Cote's quadrature formula, Trapezoidal rule, Simpson's rules, Boole's rule, Weddle's rule. C Programming of Trapezoidal, Simpson's 1/3 and 3/8th rule.

Unit: 4 (Numerical Solution of Ordinary Differential Equations)

Numerical Solution of Ordinary Differential Equations, Picard's Method, Taylor's Series Method, Euler's Method, Euler's Modified Method, Range-Kutta Methods, Predictor-corrector Methods, Milne's Method, Adams-Bashforth Method. C Programming of Euler's and Runge-Kutta method of order 4.

Unit: 5 (Curve Fitting and Regression analysis)

Curve Fitting, Method of Least Squares and group averages, fitting a Straight Line, Parabolic Curve, Fitting the Nonlinear Curves, Regression and Correlation.

OP Jindal Knowledge Park, Punjipatra, Raigarh-496109 Department of Civil Engineering

Course Description

'Effective Speaking Skills' course is designed to teach students to apply theories and principles of effective interpersonal and public speaking. This course provides instruction and experience in preparation and delivery of speeches within a public setting and group discussion. Emphasis is on research, preparation, delivery, and evaluation of informative, persuasive, and special occasion public speaking. Upon completion, students should be able to prepare and deliver well-organized speeches and participate in group discussion with appropriate audiovisual support. Students should also demonstrate the speaking, listening, and interpersonal skills necessary to be effective communicators in academic settings, in the workplace, and in the community.

Course Outcomes:

Students will be able to:

CO Number	Course Outcome
CO 1	Choose a topic and formulate the speech according to the purpose,
	audience, and time constraints;
CO 2	Employ vocal variety in rate, pitch, and intensity as suitable to the
	message, occasion, and audience;
CO 3	Use strategies and skills to manage communication anxiety;
CO 4	Present speeches using an extemporaneous style with effective
	transitions that, establish connectedness, movement from one idea to
	another, and clarify relationships;
CO 5	Use knowledge of digital presentation tools to create and make effective
	presentations;
CO 6	Participate in GD effectively; and to face interviews confidently.

Course Content

UNIT- I: SPEAKING: AN OVERVIEW

Speaking: An Overview, Listening Effectively, Non-Verbal Communication, Art of Persuasion.

UNIT- II: DYNAMICS OF PROFESSIONAL SPEAKING

Introduction, Combating Stage Fright, Describing Objects/Situations/People, Delivering Just-a-minute Sessions, Delivering Different Types of Speeches.

OP Jindal Knowledge Park, Punjipatra, Raigarh-496109 Department of Civil Engineering

UNIT- III: PROFESSIONAL PRESENTATIONS

Planning of a Presentation, Designing of a Presentation, Preparing Power Point Slides for Presentations, Individual and Group Presentations, Making Presentation.

UNIT- IV: GROUP DISCUSSIONS

Introduction, GD and Debate, Types of GD, Personality Traits to be evaluated, Dynamics of Group Behaviour, DOs and DON'Ts of GD.

UNIT -V: JOB INTERVIEWS

Introduction, Process, Stages in Job Interviews, Types, Desirable Qualities, Preparation, Tips for Success

COURSE OUTCOMES

Upon successful completion of the course,

TEXT BOOKS

- 1. Jeff Butterfield, Soft Skills for Everyone, CENAGE LEARNING, Delhi, 2014.
- 2. Sanjay Kumar and Pushp Lata, *Communication Skills*, New Delhi: Oxford University Press, 2011
- 3. Pushp Lata and Sanjay Kumar, *Communicate or Collapse: A Handbook of Effective Public Speaking, Group Discussion and Interviews*, New Delhi: Prentice Hall of India, 2007
